ABSTRACT

As part of a project to improve the quality of survey data and to link survey data to policy formulation and research needs in the military, a study was made of more than 54,000 men and women military officers and enlisted personnel in 1978-79. The survey sought information about their personal preferences and attitudes, past behavior, and career orientations. This report, organized into 16 sections, presents an overview of the survey. Section 1 provides an introduction to the project and an overview of the report, while section 2 summarizes the survey, describes the sample, and provides the additional information needed to understand and use the 556 tables in the report. The following sections cover these topics: (3) pay grade, hours of work, and assignment location; (4) age, sex, race or ethnic group, and education; (5) marital status and dependents; (6) military experience of immediate families; (7) effects of rotation and assignment on military personnel and their households; (8) financial status and participation of the military personnel and their spouses in the civilian labor force; (9) military compensation and benefits; (10) service and career plans; (11) promotion potential from the perspective of the military personnel; (12) retirement system from their perspective; (13) views of military personnel on participation in the reserves; (14) racial and ethnic relations; (15) attitudes toward women; and (16) satisfaction, morale, and problems in military life. Each section begins with a summary of the information that it contains, indicates the importance of the topic for military manpower analysis, explains the applicable tables, and describes selected results. PREFACE

This report was prepared under Task Order 81-V-1 as part of the Rand Manpower, Mobilization, and Readiness Program, sponsored by the Office of the Assistant Secretary of Defense (Manpower, Reserve Affairs and Logistics)--OASD (MRA&L).

With manpower issues assuming an ever greater importance in defense planning and budgeting, the Rand study program seeks to develop broad strategies and specific solutions for dealing with present and future defense manpower problems. A key component of the program is the development of DoD-wide data bases to support policy formulation and research for dealing with defense manpower problems. Such data should include information about the behavior, experiences, attitudes, preferences, and intentions of military personnel. Particularly if collected on a periodic basis, these data could be used to assess the response of military personnel to past and current policy changes and to identify future areas for policy action.

This report contributes to defense manpower policy analysis and evaluation by providing data that are not routinely collected—including demographic, economic, behavioral, and attitudinal—about the officers and enlisted personnel on active duty in the United States Armed Forces. The report also identifies problem areas of military life amenable to correction and specific policy areas for further analysis. Data for the report were drawn from the 1978—1979 DoD Survey of Officers and Enlisted Personnel, a survey jointly designed and administered by the Department of Defense and The Rand Corporation. 1

Doering, David W. Grissmer, Jennifer A. Hawes, William P. Hutzler, 1978 DoD Survey of Officers and Enlisted Personnel: Survey Design and Administrative Procedures, N-1458-MRAL, April 1980; and Zahava D. Doering, David W. Grissmer, Jennifer A. Hawes, William P. Hutzler, 1978 DoD Survey of Officers and Enlisted Personnel: User's Manual and Codebook, N-1604-MRAL, January 1981.

ACKNOWLEDGMENTS

The authors would like to acknowledge the continued guidance of Lt. Col. Michael W. Bryant, formerly in Enlisted Personnel Management, Office of the Deputy Assistant Secretary of Defense (Military Personnel Policy), MRA&L, throughout this research project. Lt. Col. Harry Thie of the same organization helped to interpret the data. Gwen O'Neill, Defense Manpower Data Center, provided technical and programming support. Deborah Hensler and Paul Hill of The Rand Corporation reviewed the report and along with Cheryl Cook, David W. Grissmer, and James Hosek offered helpful criticisms and suggestions. Don S. Doering verified the data in the tables.

I. INTRODUCTION AND SUMMARY

In formulating policy, the Office of the Secretary of Defense (OSD) relies on data from the automated administrative personnel files and on sample survey data. Until recently, the only other individual-level data available to OSD policymakers were those based on very small samples or filtered through the command structures of the Services. To improve the quality of survey data and to link survey data to policy formulation and research needs, OSD contracted with The Rand Corporation in 1977 to develop a long-term integrated survey research project to support policy changes and provide information about the individual preferences, attitudes, and past behavior of military personnel in response to policy changes. 1

The survey research project sought as one of its major objectives to provide policy-sensitive information about military life cycles, including enlistment decisions, career orientations, responses to policies that affect military members and their households, and decisions to leave the military. Rand designed and conducted three surveys, each focusing on respondents in a different stage of the military life cycle. The 1979 DoD Survey of Personnel Entering Military Service was administered to over 30,000 enlistees. The 1978-1979 DoD Survey of Officers and Enlisted Personnel, the subject of this report, collected data from a worldwide sample of more than 54,000 men and women on active duty in the four Services. The 1979 Reserve

³This survey, originally called the 1978 DoD Survey of Officers and Enlisted Personnel, will henceforth be referred to as the 1978-1979 DoD Survey of Officers and Enlisted Personnel (or, in short form, 1978-1979 DoD Survey) to reflect the fact that although the economic

Doering, David W. Grissmer, Jane S. Morse, 1979 DoD Survey of Personnel Entering Military Service: Wave 2 User's Manual and Codebook, N-1606-MRAL, December 1980.

Force Studies Surveys were administered to over 30,000 reservists in the Army Reserve and Army National Guard. 1

The data collected in these surveys have already been used in a variety of contexts. Staff members in OASD (MRA&L) have used specific data in internal programming and planning, as well as in responding to inquiries from Congress and government agencies. Each of the Services is analyzing the data collected from its own personnel. Rand researchers are using the data to address specific research questions, e.g., the retention of second-term enlisted personnel.

In the course of familiarizing policymakers and researchers with the data bases, Rand researchers realized that a broad overview of the data collected in each of the surveys would serve as a useful reference tool for the Department of Defense and the Services. Current statistical information can often help to place problems in perspective and to identify issues deserving policy attention and/or detailed analysis.

This report presents such an overview of the 1978-1979 DoD Survey of Officers and Enlisted Personnel. Section II of the report summarizes the survey, describes the sample, and provides the additional information needed to understand and use the 556 tables in the report. Subsequent sections, organized according to the topical areas covered

data collected in the survey pertained to calendar 1978, the actual data collection took place in the first half of calendar 1979. See: William P. Hutzler and Zahava D. Doering, 1978 DoD Survey of Officers and Enlisted Personnel: Sample Design and Selection, The Rand Corporation, N-1453-MRAL, February 1980; Zahava D. Doering, David W. Grissmer, Jennifer A. Hawes, William P. Hutzler, 1978 DoD Survey of Officers and Enlisted Personnel: Survey Design and Administrative Procedures, N-1458-MRAL, April 1980; and Zahava D. Doering, David W. Grissmer, Jennifer A. Hawes, William P. Hutzler, 1978 DoD Survey of Officers and Enlisted Personnel: User's Manual and Codebook, N-1604-MRAL, January 1981.

See: Zahava D. Doering, David W. Grissmer, Jennifer A. Hawes, 1979 Reserve Force Studies Surveys: Survey Design, Sample Design and Administrative Procedures, N-1749-MRAL, August 1981; Zahava D. Doering, David W. Grissmer, Jennifer A. Hawes, 1979 Reserve Force Studies Surveys: User's Namual and Codebooks, N-1755-MRAL, September 1981; and Jennifer A. Hawes, 1979 Reserve Force Studies Surveys: Description and Evaluation of Survey Procedures, N-1750-MRAL, September 1981.

by the survey, describe the basic military and demographic characteristics of the surveyed population, including pay grade, hours of work, and assignment location (Section III); age, sex, race or ethnic group, and education (Section IV); marital status and dependents (Section V); the military experience of immediate families (Section VI); and the effects of rotation and assignment location on military personnel and their households (Section VII). Section VIII deals with the financial status and participation in the civilian labor force of military personnel and their spouses and Section X with the monetary and nonmonetary benefits (including housing and medical services) that together with basic pay constitute regular military compensation. Section XI presents the views of military personnel on promotion policies and on their own chances of getting ahead in the military. Their assessments of retirement options are given in Section XII and their views on participation in the reserve after retiring from active service in Section XIII.

The Armed Forces have been credited with integrating more effectively and experiencing less racial tension than other sectors of the U.S. population. Section XIV reviews military personnel's perceptions of integration, including the relative number of minority group members, intergroup homogeneity, equal opportunity, and racial discrimination. Section XV deals with women in the Armed Forces from the viewpoints of both the men and women involved. Section XVI summarizes the assessments by military personnel of their satisfaction with military life and their morale and also provides information on their use of complaint channels.

Each section begins with a summary of the information that it contains, indicates the importance of the topic for military manpower analysis, explains the applicable tables, and describes selected results. In discussing results, we nighlight findings that appear particularly interesting to us, but do not comment on each table nor identify all of the possible areas for policy attention and research to which the data are applicable.

II. THE 1978-1979 DOD SURVEY OF OFFICERS AND ENLISTED PERSONNEL

This section provides an overview of the questionnaires, sample, data collection, and preparation of the data for analysis (including the weighting procedure) for the 1978-1979 DoD Survey of Officers and Enlisted Personnel. In addition, the section offers guidelines for interpreting tables in the report, including all of the conventions used in their presentation.

THE SURVEY QUESTIONNAIRES

The data base for this research consists of the more than 54,000 responses to the four questionnaires designed for the 1978-1979 DoD Survey of Officers and Enlisted Personnel, administered in the first half of 1979. The survey was designed to gather two types of data: those that are useful if collected repeatedly and those to support onetime analyses. Regularly collected data indicate the changing characteristics and attitudes of the men and women in the Armed Forces. Such data may be used to monitor, at the individual level, the long-term effects of military personnel policies--including housing, medical care, and benefits -- the formulation and budgetary review of which are the responsibility of the OSD and the Services. The survey was designed and variables were selected to ensure the comparability of the collected data with existing civilian data bases and the earlier DoD efforts. second type of data was collected for one-time analyses to support the evaluation of specific policies, options, or research issues, e.g., rotation and compensation policies, for which time series data are not necessarily required. In designing the survey, we assumed that similar data will be collected at regular intervals and that specific issues about which data are collected will change over time.

The 1978-1979 DoD Survey used four survey forms, two each for officers and enlisted personnel. Form 1 for enlisted personnel and

The OASD (MRA&L) administered similar surveys to personnel in all Services in 1969, 1971, 1973, and 1976.

Form 3 for officers dealt primarily with economic issues, civilian employment, reenlistment options, and retirement. Form 2 for enlisted personnel and Form 4 for officers dealt primarily with specific personnel practices with regard to rotation, promotion, and the use of women. Table 1 summarizes the four survey questionnaires, listing each substantive area surveyed (although not each item of the questionnaire) and indicating on which questionnaires it appeared. Forms 1 and 3, the questionnaires dealing with family economics and labor force factors, provided comprehensive information on military family income and how military personnel make decisions regarding reenlistment, separation, and retirement. The data from these forms will support such analyses as the comparison of military and civilian incomes for equivalent age and education groups, projected career patterns under different retirement options, and projected reenlistment decisions under various bonus alternatives and retirement options. Military compensation, military family income, labor force participation, and the relationship of these factors to the reenlistment decision were deemed sufficiently important to warrant complete coverage on one version of the survey.

Forms 2 and 4, which included a more diverse set of items than 1 and 3, dealt with various aspects of the quality of life in the military, as well as a number of policy issues of current interest to OSD and the Services. The data collected will support analyses of rotation policies, equal opportunity, personnel morale, job characteristics, and working hours. They will also provide previously unavailable statistics on such topics as the family military history of officers and enlisted personnel.

SAMPLE DESIGN

As in all previous DoD-wide surveys, the basic stratification variable for the 1978-1979 DoD Survey was Service. Within each Service, the officer samples were stratified by grade and sex and the

The questionnaires may be found in Doering et al., N-1604-MRAL.

enlisted samples by years of service (YOS). Within the 0-to-4 and 5-to-8 YOS groupings, the enlisted samples were further stratified by time remaining until the end of the term of service (ETS). A supplemental sampling of blacks and women provided data for particular analyses. Tables 2 and 3 summarize the nine cells in the enlisted sample and the five cells in the officer sample. To facilitate comparison, the stratification plan of the 1978-1979 DoD Survey followed that used in the 1976 DoD Survey.

Table 2
SAMPLE STRATIFICATION OF ENLISTED PERSONNEL

Sample Cell	Years of Service	Years ETS	to
1	0 to 4	≤ 1	
2	0 to 4	> 1	
3	5 to 8	≤ 1	
4	5 to 8	> 1	
4 5	9 to 12		
6	. 13 to 16		
7	17 or more		
	Supplemental Sample	a	
8	Additional females		
9	Additional blacks		

^aBoth females and blacks are included in the first seven sample cells. Supplemental samples were drawn to ensure a statistically significant number for specific analyses.

Table 3
SAMPLE STRATIFICATION OF OFFICER PERSONNEL

Sample		
Cell	Sex	Grade
1	Male	0-1, 0-2
2	Male	0-3
3	Male	0-4
4	Male	0-5, 0-6
5	Female	0-1 to 0-6

The number of usable questionnaires required in each cell, along with response rate estimates and budget considerations, determined the number of fielded surveys in each cell. The sample design required a total DoD-wide sample size of 54,000 completed and usable questionnaires: 500 for all but two sample cells, each of which required

1000. This includes the two supplemental samples of enlisted females and blacks, which were required in order to obtain a total of 500 questionnaires from each Service for each of these two groups. About 5000 Form 1 and 4000 Form 2 enlisted questionnaires were required for each Service. (The number varied slightly by Service because of varying requirements in cells 8 and 9.) Each of the two officer variants (Forms 3 and 4) required 2500 questionnaires each for the Army, Navy, and Air Force and 2000 for the Marine Corps.

SURVEY ADMINISTRATION AND RESPONSE RATES

Individuals were selected by name, based on Service personnel records as of September 30, 1978, to participate in this survey. The actual data collection was the responsibility of Service-specific administrative units, coordinated through a primary point of contact who worked with The Rand Corporation and the Defense Manpower Data Center.

In the Army, personnel survey control officers, working through the Survey Branch, Army Military Personnel Center, are responsible for survey administration. In the Air Force, the Consolidated Base Personnel Offices (CBPOs) are responsible for survey administration, and the Survey Branch, Air Force Military Personnel Center, coordinated the work. Because the Department of the Navy currently does not have a general survey capability, special arrangements for data collection were made in both the Navy and the Marine Corps. In the Navy, the commanding officers of units containing sampled individuals administered the survey, and the Research, Development and Studies Branch, Office of the Chief of Naval Operations, coordinated the effort. In the Marine Corps, the Marine Corps commands administered the survey, and the Management Information Systems Branch, Marine Corps Headquarters, was the primary point of contact.

Form 1 required 1000 questionnaires from respondents within one year of ETS and with less than five years of service and 1000 from those within one year of ETS and with five to eight years of service.

The administrative units were responsible in each case for distributing questionnaire packets to specific individuals and returning individually sealed, completed questionnaires to the Defense Manpower Data Center. Administrators were provided with rosters of individuals selected for the survey and asked to indicate whether each person on the list received and returned a questionnaire packet, or for those who could not participate, the reason, e.g., separated or relocated.

Table 4 summarizes the fieldwork of the 1978-1979 DoD Survey by Service, officers, and enlisted personnel, including the number of questionnaires fielded and returned. The response rates shown in the table are unadjusted. That is, they represent the ratio of returned questionnaires to the total number of questionnaires mailed. The

number of questionnaires fielded was not adjusted to account for persons who had been separated from the Service or transferred to another station prior to receiving the survey. Returned questionnaires were not forwarded to new locations. Table 5 shows the fieldwork results in terms of the required and returned number of questionnaires for each variant of the survey. All of the groups sampled, except Army officers (Forms 3 and 4), returned a larger number of questionnaires than that required for analyses.

DESCRIPTION AND LIMITATIONS OF THE WEIGHTS

To allow time to assemble and mail questionnaires to administrative units around the world, we planned a gap of several months between sample selection and survey administration. Recognizing that some individuals would separate from the Service between sample selection and

survey administration, we excluded from the Service personnel tapes the names of individuals with an ETS date prior to the estimated survey administration date of February 1, 1979. We made no provisions for surveying those who joined between sample selection and survey administration. These restrictions and other technical considerations resulted in the exclusion from the sample of (1) individuals who reenlisted but who had original ETS dates between sample selection (October 1978) and survey administration (February 1979) and (2) individuals with less than four months of service in the Navy, Marine Corps, or Air Force, or five months of service in the Army, i.e., new accessions. Had the reenlistees been surveyed, they would have been included in all sample cells except enlisted cell 1 (0 to 4 years of service). Had the new accessions been surveyed, they would have been included in enlisted cell 2 (0 to 4 years of service and more than one year to ETS) or in one of the lower pay grade officer cells.

The data provided in this report have been weighted to adjust for the fact that, first, the sampling plan allowed for disproportionate sampling among subgroups in the DoD population and, second, the sampled subgroups did not respond to the survey at identical rates. We made two assumptions in calculating the weights for the survey, based on cell specific response frequencies and the DoD population as of March 31, 1979. These assumptions, based on comparisons of groups on demographic characteristics from the March 1979 personnel files, were as follows:

Individuals in each population cell who had recently reenlisted were excluded from the sample universe but were assumed to be similar in characteristics, experiences, and orientations to those included in the survey sample. Therefore, reenlisted individuals were included in the population total for the calculation of weights.

¹This date was selected since it most closely reflects the month in which the data were collected.

o Accessions between the sample selection and survey administration were assumed to differ from those in the 0- to 4-year cell with more than one year to ETS and were excluded in the calculation of weights.

These assumptions imply that the population to which the survey is assumed to apply is the DoD population with more than four months of service (five months for the Army) as of March 31, 1979. Table 6 shows the total Service population, the population to which the survey applies, and the proportion of the latter population responding to the survey.

EXPLANATION OF THE TABLES

All tables in this report use the same formats and naming conventions. Most of the tables result from cross tabulation and thus show Table 6

RELATIONSHIP OF RETURNED QUESTIONNAIRES TO DOD POPULATION
(As of March 31, 1979)

	Army	Navy	Marine Corps	Air Force	DoD Total
Enlisted					
Total strength	650,890	458,492	167,192	465,550	1,742,124
Generalizable population	613,469	439,734	157,717	446,525	1,657,445

Proportion of generaliz- able population re- sponding to survey	.050	.096	.270	.054	.07?

NOTE: Generalizable population refers to individuals with more than four months of service (five months for Army).

the joint frequency distribution of responses according to one or more classification variables. Some contain average values of responses according to one or more classification variables. In all cases, the tollowing conventions apply:

- 1. In a two-way table, the column variables are always Service and a DoD total and the row variable is a questionnaire item or subitem. The title of the table indicates the status of the personnel—enlisted or officer—and the questionnaire item or subitem to which the data apply. For example, the colums of Table 7 (p. 22), "Distribution of Enlisted Personnel by Pay Grade," are labeled "Army," "Navy," "Marine Corps," "Air Force," and "DoD Total." The rows, labeled "E-1" through "E-9" are headed by the name of the variable, in this case, "Enlisted Pay Grade."
- 2. Three-way tables are cross classifications of two questionnaire items by Service and DoD total. These are presented as a set of five two-way tables, one for the DoD total and one for each Service. The title of each of the five tables indicates its contents and whether the data pertain to (a) enlisted personnel or officers and (b) a specific Service or DoD as a whole. The column variable is named before the row variable, and the column and row variables are clearly labeled. For example, in Table 16 (p. 33), "Enlisted Personnel Time at Present Location," the column variable is time, shown in 12-month intervals and the rows are 11 geographic areas. Tables 17 through 20 (pp. 34-37) display the same two variables, time and location, for each of the four Services. In a few instances, a three-way table is displayed as one table. The conventions explained here apply, except that the data for the DoD total and for each of the Services appear on a single page.
- 3. Within each table, the percentages, averages, or other statistics are based on the weighted population grand total, shown in the lower right-hand corner. The total population

varies from one table to another because data are missing or unavailable for individual survey questions. For example, the data in Table 7 (p. 22) are based on responses that, weighted, represent 1,652,116 enlisted personnel; data in Table 14 (p. 31) represent 1,649,176 enlisted personnel. A weighted population total, labeled "Total Personnel," is shown at the bottom of each Service or DoD total column in each table. Row population totals are not shown. They can be calculated, however, from the available information as described below.

- 4. Tables that display joint distributions give both column and row percentages, rounded to the nearest tenth. The column percent is given first, and the row percent immediately below it. Subject to rounding, columns and rows total 100 percent; this total is not shown. In a few cases, as a result of rounding and the different bases used in calculating these percentages, a zero column percent may be accompanied by a nonzero row percent. To preserve as much information as possible, we have not edited out these apparent contradictions.
- 5. Tables displaying the average value of a particular variable contain only column entries. Table 31 (p. 48), for example, shows the average number of hours per week that enlisted personnel reported spending on call, on alert, or on a duty roster by pay grade. A column of data is shown for each Service and the rows indicate the enlisted pay grades, E-1 to E-9. The number 16.0 in the Army column, across from the variable label E-4, indicates that Army respondents in pay grade E-4 reported an average of 16.0 hours a week on call.

The kinds of errors inherent in the survey data include sampling error and nonresponse bias, as well as inconsistencies introduced by extraneous and inconsistent data. The data give, for the most part, the distributions of cross-classified survey responses. Three explicit decisions were made, however, which directly affect the computation of

these distributions. First, all tables presented here are based on valid, usable responses to survey questions. The missing data category has been excluded and imputation techniques have not been utilized. Second, extreme values have not been deleted. In the original data coding, broad ranges were defined for the acceptable responses for continuous variables, e.g., income. The data in these ranges have been used here without further truncation. Finally, possibly extraneous or inconsistent data provided by respondents have not been completely deleted, based on the assumption that these are the result of real life complexities and anomalies created in this type of data collection activity. The data presented in this report are meant to provide useful background information on the attitudes and behavior of the men and women in the U.S. Armed Forces. As useful as these indicators may be, however, they cannot replace detailed analysis of important military manpower issues.

AND ENLISTED PERSONNEL

This and the following sections contain tables showing the basic military and personal characteristics of the enlisted personnel and officers who participated in the survey. Military characteristics include pay grade, years of service, and assignment location. Personal characteristics, presented in Section IV, include age, sex, race, ethnic identification, and education attainment. This section also presents tables describing the work environments of military personnel, including distributions by assignment location, time spent and time remaining at those locations, the average hours worked, whether or not individuals perceive themselves as working within their military specialties, and several other work-related characteristics.

Tables 7 and 8² contain the pay grade distributions of the surveyed population. Pay grade and rank are probably the most important military status variables. Military salaries and many related benefits are based on pay grade, as are rules for behavior and work-related interactions. Within a set of constraints, pay grade can be used as a measure of the success or failure of an individual's military career. The pay grade distribution within a Service also indicates the experience of its members. At the time of this study, Marine Corps enlisted personnel were concentrated in lower pay grades than the enlisted personnel of the other Services; the Navy had a higher proportion of enlisted

Although much of the data presented in these survey tables is available in official DoD and Service administrative records, the survey data differ from the administrative data in several respects. First, as discussed in Section II, the population from which the survey data are drawn excludes new accessions, i.e., personnel with less than four months of service in the Navy, Marine Corps, or Air Force or five months of service in the Army. This exclusion creates some differences, e.g., in pay grade distributions. Second, both administrative data and survey data are subject to reporting and recording errors, which may lead to different results. Third, population characteristics, being dynamic, may have been captured differently by each data source.

 $^{^2}$ See pp. 22 and 23. Henceforth, all tables will appear at the end of the section in which they are mentioned.

personnel in high pay grades than the other Services, followed by the Air Force. Officers showed similar patterns.

Tables 9 and 10 display population distributions according to years spent in military service. As of March 1979, almost 60 percent of enlisted personnel had had their total military experience since the draft ended in June 1973, i.e., as members of the all-voluhteer force (AVF). This percentage varies somewhat from Service to Service, with 50 percent of Air Force enlisted personnel having six years or less of military service, 75 percent of Marine Corps personnel, and about 60 percent of Army and Navy personnel. Most of the officers' experience, on the other hand, predates the transition to the AVF. Table 10 shows that only about one-third of all officers had six years or less of military experience as of March 1979, although the percentage of such officers differed among Services, e.g., 40 percent in the Marine Corps and 30 percent in the Air Force. The distributions of officer experience reflect promotion policies; force-size policies during and after World War II, the Korean conflict, and the Vietnam war; and individual decisions to remain in the military.

Table 11 shows the distribution of enlisted personnel by enlistment period. Because the length of an enlistment period varies both within and among the Services, the data are not directly comparable. In the Armed Forces as a whole, however, about 40 percent of enlisted personnel are still serving within their first enlistment contract; i.e., they have not yet faced a reenlistment decision. Table 12 shows that at any given time, about one-fourth of enlisted personnel are within one year of making a reenlistment decision. Similar data for officers in Table 13 show that about 50 percent of officers have no contractually obligated service remaining, and another 37 percent have three years or less of obligatory service remaining.

Tables 14 and 15 show the distributions of military personnel according to the location of their assignment. Tables 16 through 25 display the actual time (in months) that military personnel have been

Personnel on board ships were asked to indicate their home port.

20

at their present location. 1 Service differences result directly from differences in rotation policies and in the experience levels of their members. The shortest lengths of time in a given location were reported by Marine Corps enlisted personnel and Navy officers; the longest by Air Force enlisted personnel and officers. To aid the study of the relationships between rotation policies and attitudes toward military service, the survey also gathered information (not given in this report) about the time that individuals have remaining at these locations.

We next turn to data describing individual work assignments. Most military officers hold supervisory positions; enlisted personnel fill both supervisory and nonsupervisory positions. Table 26 indicates that about 34 percent of all surveyed enlisted personnel, and a somewhat lower percentage in the Air Force, view their work as largely supervisory. These percentages would decrease sharply had the survey population included individuals in their first months of military service, when they perform mostly nonsupervisory work.

The survey collected detailed information about the occupational specialties of both enlisted personnel and officers. The survey data sets contain both Service-specific occupational codes and a conversion of those codes to a common Department of Defense classification. Because of their complexity, these data are not included in this report.

Surveyed personnel were asked to assess the amount of time they spent, during the month prior to the survey, working outside their current primary occupational specialty. About 30 percent of enlisted personnel in the Army, Navy, and Marine Corps and 14 percent in the Air Force reported spending most of their time performing work not related to their training (see Table 27). At the other extreme, about 33 percent of all enlisted personnel (and a low of about 25 percent in the Navy) reported spending no time outside their current primary occupational specialty. The overall pattern for officers was similar to that for enlisted personnel. Individual Service patterns, however,

These ten tables constitute two sets of five tables each: one set for officers and one for enlisted personnel, and in each set, one table for the DoD total and one for each of the Services, as explained in Section II above.

differed somewhat: Over 40 percent of Marine Corps officers, 30 percent of Army officers, 23 percent of Navy officers, and 10 percent of Air Force officers reported working most of the previous month outside their specialty. On the other hand, over 42 percent of officers in the Army, Navy, and Air Force reported that none of their time had been spent outside their specialty; the comparable figure for the Marine Corps was about 35 percent (see Table 28). Further analysis by occupational specialty would identify areas in which highly trained individuals do not perceive themselves as having the opportunity to maintain their skills.

Air Force and enlisted personnel and officers both reported shorter working hours and a higher proportion of "regular" working hours on average than did members of the other Services. Among officers more clearly than among enlisted personnel, working "regular" hours seems to be a prerogative of rank: The higher the rank, the lower the average number of "other" hours reported.

Tables 29 and 30 show the average weekly hours worked by military personnel by pay grade. Hours of work have been divided into "regular" and "other." The survey questionnaires defined "regular" as hours worked between 6:00 a.m. and 6:00 p.m., Monday through Friday, and "other" as evenings, nights, and weekends. Individuals were also asked to report the average number of hours per week that they spent on call, alert, or a duty roster, in addition to the hours worked. The results are displayed in Tables 31 and 32, as averages, by pay grade.

Enlisted			Marine	Air	DoD

IV. PERSONAL BACKGROUND OF OFFICERS AND ENLISTED PERSONNEL

This section focuses on the individual characteristics of the men and women on active duty. Two basic demographic characteristics of populations, age and sex, are presented first. Table 33 for enlisted personnel and Table 34 for officers show the age distributions of men and women, by Service and total, at the time of the survey. In every Service, enlisted women tend to be younger than enlisted men. enlisted men and women in the Marine Corps, on average, are younger than members in the other Services. Air Force men tend to be older than men in the other Services. As would be expected, officers are older than enlisted personnel. A comparison of the distributions in Tables 33 and 34 indicates that about 59 percent of enlisted men and 79 percent of enlisted women are between the ages of 16 and 26, but only 21 percent of male officers and 37 percent of female officers are in that age range. Data in these tables can be used to calculate the proportion of men and women in each Service, both overall and by age group.

Table 35 for enlisted personnel and Table 36 for officers show the age distributions of men and women, by Service and total, at the time they entered military service. Although Tables 33 and 34 show enlisted women to be younger than men overall, women tend to be somewhat older than men when they enter the military. This discrepancy likely results from differences in retention and recruitment of men and women: Women tend to remain in the military for shorter periods than men, and the recruitment of women in significant numbers has not been going on for as long a time as the recruitment of men. Further, both men and women enter the military precisely during those ages in which a great many changes take place in their personal lives, e.g., during the early years of family formation.

Tables 37 and 38, which display the racial background of the survey populations by sex, indicate that blacks constitute about 30 percent of enlisted personnel in the Army, 10 percent in the Navy, 15 percent

in the Air Force, and 19 percent in the Marine Corps. Within Services, the differences by sex in these percentages are minor. The Marine Corps has a larger percentage of Hispanics, both male and female, than the other Services. The Navy, with about 4 percent, has the smallest percentage of enlisted Hispanic men and women. Whites predominate in the officer ranks of the Armed Forces, constituting at least 90 percent in all Services except the Army, where the percentage is only slightly lower. In all Services, the percentage of minority female officers is slightly higher than percentage of minority male officers. In the Army, for example, about 8 percent of female and 6 percent of male officers are black. Tables 39-48 show the ethnic backgrounds of enlisted personnel and officers by pay grade.

Individuals entering the military bring with them experiences and attitudes shaped by the region of the country and the type of community in which they lived. Tables 49-53 for enlisted personnel and Tables 54-58 for officers show residence at the age of 16, by location and type of community. Although the actual percentages reflect U.S. population distributions, they nevertheless vary among Services. For example, Army enlisted personnel are more likely to come from the South Central states than personnel in the other Services, and more Navy personnel reported living in a foreign country at the age of 16 than did members of the other Services.

Extensive policy discussions have focused on issues related to the role of the Armed Forces in the education of its members, both during and after military service. Tables 59-72 display data that apply to some of those questions. Table 59 shows the distribution of enlisted personnel by educational level at service entry; Table 60 contains the same information for officers. In both cases, the lower ends of the distributions reflect the minimal Service standards that applied at the time these individuals entered the military. Table 61 and Table 62 show the educational distributions at the time of the survey. Substantial educational upgrading obviously takes place in the course of military careers. The precise shifts for the Armed Forces as a whole and for each Service are presented in Tables 63 to 67 for enlisted personnel and Tables 68 to 72 for officers.

The data show that, overall, about one-third of the enlisted population on active duty in March 1979 obtained at least one additional year of accredited education after entering the military. More Army and Air Force enlisted personnel (about 40 percent) showed gain than did enlisted personnel in the Navy (25 percent) and Marine Corps (28 percent). In all Services, individuals with lower levels of education at entry were more likely to obtain additional education. Enlisted personnel who entered with 12 years of education, i.e., high school graduates, were less likely to obtain additional education than those who entered with less than a high school education or with some education after high school.

Educational gains reported by officers were greater than those reported by enlisted personnel. Overall, 60 percent of officers reported obtaining at least one additional year of accredited education. Marine Corps officers reported the lowest gains (49 percent) and Air Force the highest (65 percent). Different experience in the military (see Tables 8 and 10 in Section III) account for some of these differences; e.g., individuals in the Air Force may have more time in which to obtain additional education.

V. THE IMMEDIATE FAMILIES OF MILITARY PERSONNEL

This section focuses on the marital status of military personnel, the number of their dependents, and the geographical distribution of their families. Like age and sex (discussed in Section IV), position in a "family life cycle" influences the responses of military personnel to such occupation-related aspects of military life as rotation policies and work schedules.

Tables 73-77 for enlisted personnel and Tables 78-82 for officers show marital status at the time of the survey, by pay grade. About 60 percent of enlisted personnel were married at the time of the survey; however, marital status differed according to pay grade and Service. Individuals in the lower pay grades were younger and thus less likely to be married. The Service differences result primarily from the differences in Service age and pay grade distributions.

Among the Services, the Marine Corps had the largest proportion of never married enlisted personnel, and the Air Force had the smallest. About 78 percent of officers were married; the differences within and between the Services were smaller than those observed for enlisted personnel.

The extent to which an individual's personal life changes in the course of the military service is demonstrated in Tables 83-87 for enlisted personnel and Tables 88-92 for officers, which show the relationship between marital status at Service entry and current marital status. The majority of enlisted personnel, ranking from 83 percent in the Army to over 92 percent in the Marine Corps, were not married when they entered the military. Many enlisted personnel

Sociologists generally define the family life cycle as consisting of six stages, beginning with marriage. The second stage begins with the birth of the first child, the third with the birth of the last child. The permanent departure of a child from home begins the fourth stage. The departure of the last child marks the start of the fifth, or "empty nest," stage, which lasts until the death of one spouse. The family life cycle ends with the death of the remaining spouse.

married after entering the Armed Forces; others underwent marital breakups. While only 8 percent of enlisted personnel report being divorced, widowed, or separated at the time of the survey, most of this family disruption took place during the time they were in the military. Differences by Service were slight. Officers were more likely to be married at Service entry, primarily because they were older. About 30 percent of Army and Air Force officers and 20 percent of Navy and Marine Corps officers were married at entry. Family disruption patterns were similar to those of enlisted personnel.

The survey collected considerable data about spouses, children, and other dependents. Table 93 for enlisted personnel and Table 94 for officers show the distributions of the number of dependents, excluding the respondents and their spouses. Among enlisted personnel, 48 percent reported no additional dependents and 47 percent reported between one and three. An analysis by age would show that the former had not yet begun to form families, rather than that their children had permanently left home. The majority of large enlisted households were found in the Army. Among officers, 35 percent reported no dependents (excluding their spouse) and 58 percent reported between one and three. Officers, on average, have more dependents; Service differences among officers are less marked than among enlisted personnel.

The survey also asked for information on the relationship of each dependent to the respondent, the dependent's sex and age, and whether or not the dependent resided with the respondent at the time of the survey. Data on the number of dependents, classified in terms of their relationship to the respondent as "children" or "other dependents," are shown in Table 95 for enlisted personnel and Table 96 for officers. As would be expected, children constituted the majority of dependents. Throughout the Armed Forces, for example, only one percent of the enlisted personnel who reported one dependent identified that dependent as other than a child. An analysis of the detailed data (not given here) showed that the majority of dependents other than children were parents or parents-in-law. Tables 97-101 for enlisted personnel and Tables 102-106 for officers array respondents by marital status, dependents, sex, and pay grade. Individuals with dependents

but without spouses may be considered somewhat more likely to encounter problems in meeting family and military needs than are individuals who have both dependents and a spouse, only a spouse, or neither a spouse nor dependents. Some 4 or 5 percent of the enlisted males in each Service have dependents but no spouse; among enlisted females, the percentage ranges from about 4 percent in the Air Force to 10 percent in the Army. Among officers, both males and females, the rates for dependents but no spouse never exceed 4 percent.

When a military member is assigned to a new location, the decision to relocate his or her family is governed by both military policies and individual preferences. A member may decide for or against having his family accompany him to a new location; at the same time, the Service may or may not authorize the member to take his family with him. Table 107 for enlisted personnel and Table 108 for officers show the geographic distribution of military personnel and whether or not they were accompanied by their spouse, and for those who were not accompanied, whether or not spousal accompaniment was authorized. Table 109 for enlisted personnel and Table 110 for officers further classify those who are accompanied by spouse and/or dependents according to whether or not the respondent's command sponsored the spouse and/or dependents. Tables 111-120 display, without consideration of authorization, the geographic distribution of dependents, by number, accompanying enlisted personnel and officers.

VI. FAMILY MILITARY EXPERIENCÉ

The men and women in the Armed Forces are influenced by the military experiences of family members who have served or are serving in the military, as well as by their own military experiences. The tabulations in this section display the findings from a series of questions about the family military experience of both officers and enlisted personnel. Respondents were asked to report how many members of their immediate family—defined as father (or male guardian), mother (or female guardian), children, brothers, and sisters (or step-siblings)—had ever served on active duty in the military. For each family member who had served, the respondent recorded the relationship, the Service in which he or she had served, and the years of service completed.

Table 121 for enlisted personnel and Table 122 for officers show the number of immediate family members who have served in the military, displayed by the age of the respondent. For the Armed Forces as a whole, about 25 percent of enlisted personnel and officers indicated that no immediate family member had served in the military. About 40 percent of enlisted personnel and 45 percent of officers reported one family member and 20 percent of both enlisted personnel and officers reported two members. The remainder reported three or more. Younger enlisted personnel and officers were more likely to have had an immediate family member in the military, undoubtedly because of the high draft levels of the World War II and Kor. n war periods. Service differences, after controlling for age, were minor (data are not shown).

Tables 123-127 for enlisted personnel and Tables 128-132 for officers show the relationship to the respondent of family members who had served. The data have been aggregated to show specific patterns, e.g., father only or father and brother. The percentages are based on that portion of the military population having at least.one immediate family member in the military.

Because membership in the reserves was not captured, the data in this section represent a lower bound of the military experience of family members.

Table 123, for all enlisted personnel, shows that in cases where at least one immediate family member was reported, 73 percent indicated the father (or male guardian) as that person. Among all officers, Table 128, the comparable figure was 77 percent. If at least two immediate family members were reported by either officers or enlisted personnel, in about half the cases the two family members were the father (or male guardian) and a brother. Both enlisted personnel and officers also reported children in the military. Among enlisted personnel, none of the combinations with children occurred more frequently than 0.3 percent of the time; however, a total of 1.1 percent reported a child in the military. Among officers, 0.8 percent reported only a child, 0.4 a father and child, and 2.2 percent a child in combination with other immediate family members.

Further analyses of these data might examine in detail the relationship between the Service of the respondent and the Service of the immediate family member who had served, as well as the number of years served. Table 133 shows the military service of fathers (or male guardians) of enlisted personnel by sex of the surveyed members; Table 134 reports these data for officers. About half of the fathers of both enlisted personnel and officers served in the Army. The extensiveness of Army service is accounted for by such factors as military conscription policies in the past several decades. Nevertheless, the data suggest a tendency for respondents to serve in a Service in which immediate family members have had experience.

VII. THE ROTATION EXPERIENCE OF MILITARY PERSONNEL AND THEIR HOUSEHOLDS

The men and women of the Armed Forces of the United States are rotated periodically both within the United States and between the United States and foreign posts. The policy of rotation serves the twofold objective of providing service personnel with a broad range of experience and of maintaining military readiness. Much of the need for rotation stems from changing force sizes, the replacement of personnel lost to the Services through retirement and other types of attrition, and factors resulting in a temporary decrease in personnel productivity.

Rotation directly affects the households of the more than half the members of the Armed Forces who are married and/or have dependents. The data in this section contribute to the discussion of current and future rotation policies. As background, Tables 135 and 136 show the number of permanent changes of station made by enlisted personnel and officers during the course of their military service. Subsequent tables (Table 137 for enlisted personnel and Table 138 for officers) show the number of times the service member's spouse or dependents moved to a new location. The only significant difference among Service distributions for enlisted personnel involved Marine Corps respondents, 27 percent of whom were not yet rotated; comparable percentages for the other three Services ranged between 18 and 20. The difference may be attributable to the fact that the Marine Corps enlisted respondents, as a group, had less service experience than the enlisted respondents in the other Services (see Section III, Table 9). The officer respondents reported a rotation frequency similar to that of enlisted personnel, except at the extremes of the distribution, where they reported nine or more changes of station

l"Permanent" in this context implies a transfer for a regular tour of duty as opposed to a temporary reassignment.

three times more often than enlisted personnel. At the other end of the scale, a smaller percentage of the officers reported having experienced no reassignment.

The families of officers tend to relocate relatively more often than the families of enlisted personnel. As expected, the data show that dependents of military personnel relocate less frequently than the military member of the family. Thus, military assignments frequently involve the separation of family members for varying amounts of time. Overall, 18 percent of enlisted personnel had been separated from their families for half or more of the year preceding the survey. Those with shorter periods of service were more likely to have experienced longer separation (data not shown). Navy and Marine Corps personnel (both officers and enlisted) tended to spend more time separated from their families than did members of the Army and Air Force (see Tables 139-143 for enlisted personnel and Tables 144-148 for officers; in which separation time is tabulated according to the characteristic structure of the military family). Tables 149-153 for enlisted personnel and Tables 154-158 for officers show the distribution of years personnel reported spending overseas. The next set of tables (159-168) shows the average percent of time that enlisted personnel and officers spent overseas, by expected total years of service. In addition, the average time (in percentages) that Navy personnel spent on sea duty is shown in Tables 169 and 170.

Military personnel were asked to assess the severity of the problems—such as moving and setting up a new household and adjusting to a new environment both at work and in the community—that they may have encountered in moving to their present permanent post. For most of the enlisted personnel and officers sampled, that move took place during the three years immediately preceding the survey. Tables 16-25 (see Section III, above), showing time at present location, indicate that 29 percent of the surveyed enlisted personnel have been at their present location less than one year, 36 percent between one and two years, and 21 percent between two and three years. Among officers, 33 percent have been at their present location less than one year, 33 percent between one and two years, and 22 percent between two and three years.

The following set of tables displays the responses to questions about problems related to a permanent change of station (PCS). Responses are reported as "a serious problem," "somewhat of a problem," "a slight problem," "not a problem," or "don't know." The PCS-related problems reported in the tables include the following:

Adjusting to a higher cost of living (Tables 171 and 182)

Moving and setting up a new household (Tables 172 and 183)

Paying for unreimbursed moving expenses (Tables 173 and 184)

Finding off-duty employment for yourself (Tables 174 and 185)

Finding civilian employment for your spouse or dependents (Tables 175 and 186)

Continuing your education (Tables 176 and 187).

Finding permanent housing (Tables 177 and 188).

Finding shopping areas, recreation facilities, etc. (Tables 178 and 189)

Adjusting to new environment--children / (Tables 179 and 190)

Adjusting to new environment--spouse (Tables 180 and 191)

Adjusting to new environment--self (Tables 181 and 192)

Four of these problems—adjusting to a higher cost of living, finding civilian employment for family members, paying for unreimbursed moving expenses, and moving and setting up a new household—are each reported as being serious by approximately 20 percent of enlisted personnel. About 40 percent identified each of these four problems as being either serious or somewhat of a problem. Differences among the Services result in part from the type of location to which personnel are moved. Army personnel were more likely than those in other Services to say that adjusting to a higher cost of living was a serious problem, partly because a greater proportion were sent overseas at a time when the dollar was relatively weak. Air Force personnel were most likely to

consider finding civilian employment less of a problem, partly because more of their moves were within the United States. Finding permanent housing, continuing education, and finding off-duty employment, the next most frequently cited relocation problems, were seen as serious by about 15 percent of enlisted personnel. Finally, the adjustment of a spouse to a new environment was considered a serious problem by twice as many personnel (12 percent) as considered their own or a child's adjustment a serious problem (6 percent).

On the whole, officers tended to see these problems as somewhat less serious than did enlisted personnel. Among officers, the six problems identified by the largest number of officers as serious were finding civilian employment for family members, adjusting to a higher cost of living, continuing education, moving and setting up a new household, finding permanent housing, and paying for unreimbursed moving expenses; between 12 and 17 percent of the officers identified each of these as a serious problem. The remaining problems were considered serious by between 3 and 9 percent of the officers. With one exception, continuing education, Service differences are minor. As can be seen in Table 187, 21 percent of Army officers saw continuing their education as a serious PCS-related problem, compared to 12 percent of Air Force officers and about 16 percent of both Navy and Marine Corps officers.

Tables 173 and 184 show that 55 percent of the surveyed enlisted personnel and 60 percent of the officers saw paying for unreimbursed moving expenses as a problem to some degree. Respondents were asked also to report the actual amount that was not reimbursed for their last move, including unreimbursed expenses for themselves and/or their dependents for travel, temporary housing, and replacing items that were damaged or could not be moved. Tables 193-197 for enlisted personnel and 198-202 for officers show the reported unreimbursed amounts by respondents' year of service. Tables 203 and 204 display unreimbursed PCS costs, by the marital status and number of dependents of enlisted and officer personnel. Because the variation in these data among the Services is slight, the data are not displayed here.

Before reassignment, most military personnel have the opportunity to express a preference for their next assignment. Table 205 for enlisted personnel and Table 206 for officers indicate the number of locations requested. Among enlisted personnel, about one-third, ranging from 22 percent in the Air Force to 52 percent in the Marine Corps, expressed no preference for their next post. Among officers, about one-fourth reported that they had no preference, with little difference among the Services. Some 43 percent of enlisted personnel reported that they had not been assigned to any location of their choice (Table 207). Approximately 30 percent in each Service reported being assigned to their first choice and ll percent to their second. Navy enlisted personnel appear most likely to receive either their first or second choice. Among officers, 31 percent indicated that they had not been given the assignment of their choice (Table 208). Over 40 percent of officers, however, were assigned to their first choice and 14 percent to their second.

The survey collected detailed personnel histories of assignment locations and personal assessments of the positive and negative characteristics of those locations. This report presents only the evaluations of respondents' current or immediately preceding overseas assignment and a listing of locations selected as the most and least preferable.

Table 209 for enlisted personnel and Table 210 for officers include the evaluations of overseas location characteristics, tabulated in terms of whether the respondent was in the United States or overseas at the time of the interview. The evaluations on the questionnaires were marked on a five-point scale, with verbal cues "excellent," "good," "fair," "poor," and "very poor." The mean and standard deviations shown in the tables are based on coding the verbal cues as +2, +1, 0, -1, and -2, respectively. The wide distribution of the ratings suggests the desirability of location-specific analysis. The survey was organized

The list of locations provided in the questionnaires was Service specific, and respondents were asked to consider Alaska and Hawaii overseas locations.

so as to permit location-specific analysis of this as well as other data items.

Table 211 lists the locations that were the first choice of enlisted personnel for their next overseas tour; comparable data for officers appear in Table 212. The next set of tables shows the distribution of last choice locations from the same list (Tables 213 for enlisted personnel and 214 for officers). For further analyses, data are available showing the preferences of each respondent for a total of six locations: first, second, and third choice and the three-least desirable choices.

The last pair of tables in the section summarizes the level of satisfaction of military personnel with their current assignment location on a seven-point scale ranging from "very dissatisfied" to "very satisfied." Overall, about one-third of the enlisted personnel (Table 215) and 53 percent of the officers (Table 216) marked the two highest satisfaction points on the scale. At the low end, 22 percent of the enlisted personnel and 10 percent of the officers expressed dissatisfaction. Among the Services, Army enlisted personnel were the least satisfied and Air Force the most. The Service differences among officers are minor.

VIII. THE FINANCIAL STATUS AND PARTICIPATION IN THE CIVILIAN LABOR FORCE OF MILITARY PERSONNEL AND THEIR SPOUSES

The civilian labor market plays an important role in the financial status of military families. Military personnel consider civilian job opportunities a major reason for leaving the military. In addition to providing an attractive employment alternative, the civilian labor market also hires a significant number of skilled military personnel on a part-time basis. This part-time employment raises such policy questions as whether the current levels of military compensation are high enough and whether service personnel can do their military jobs effectively while simultaneously holding outside employment.

The status of military spouses in the civilian labor force also has implications for military personnel policy. Civilian data show an increasing number of women in the civilian labor force, approximately half of whom are married. Whereas in 1950 about 23 percent of the women in the labor force were married, this proportion had increased to 46 percent by 1976. If similar trends exist among military spouses, employment opportunities for women will become increasingly intertwined with the decisions of military personnel to remain or leave military service. Furthermore, the increase in the number of women in the military, many of whom are married, implies that the occupational decisions of their husbands, whether they be in the civilian labor force or the military, may affect the reenlistment decisions of military women.

The data in this section describe the experiences of military personnel and their spouses in the civilian labor market, the contribution of civilian income to the total income of military households, military families' sources of income other than military and civilian wages, the job search activities of military personnel, their perceptions of their chances of finding a good civilian job on separation from the military, their comparisons of selected military and civilian job characteristics, their debts and assets, and their assessments of their own economic well-being.

¹ See Section X.

Tables 217-221 show, by pay grade, the number of hours per week worked by enlisted personnel in civilian jobs in 1978. Overall, 85 percent of enlisted personnel reported no civilian labor force participation, 8 percent between 1 and 20 hours per week, about 5 percent between 21 and 40 hours per week, and 1 percent over 40 hours. The majority of those who worked were in pay grades E-4 and E-5; E-3s and E-6s also reported substantial time spent in outside jobs. Air Force enlisted personnel were most likely to have some civilian employmen"; Army personnel, the least. The Service-specific data obscure major geographical differences in civilian employment; the deployment of Army personnel in Europe and Navy personnel at sea implies relatively greater participation among members of those Services in the United States. As shown in Tables 222-226, officers were less likely to have civilian jobs, and 94 percent indicated that they did not have a civilian job in 1978. Among the Services, Air Force officers reported the greatest civilian labor force participation. In every Service, 0-3s and 0-4s were more likely to have a civilian job.

Table 227 shows the degree to which civilian wages of enlisted personnel contributed to total family income; Table 228 displays the comparable officer data. About half of the enlisted personnel reported their civilian income to be a negligible fraction (0 to 5 percent) of the total family income, 29 percent indicated that it constituted 6 to 25 percent, and the remainder, over 26 percent. Among officers, 12 percent reported civilian income as constituting between 6 and 25 percent, 7 percent reported it to be over 25 percent, and 81 percent considered it negligible.

Tables 229-233 for enlisted personnel and Tables 234-238 for officers examine the labor force participation of spouses, by the number of dependents. Only spouses of respondents who were married at the time of the survey are included in the tables. The data show greater labor force participation on the part of the spouses of enlisted personnel than on the part of officers' spouses and a higher likelihood of full-time labor force participation than part-time or self-employment. Further analyses should examine this participation

by geographical distribution. Tables 239 and 240 give the number of weeks worked by spouses in 1978. Tables 241 and 242, the counterparts to Tables 227 and 228, above, show the percentage of total family income earned by spouses.

Tables 24.3 through 252 show the sources other than military or civilian employment from which enlisted personnel received income in 1978 and the extent to which they received such income; Tables 253-262 give comparable data for officers. The extent to which unearned income contributed to the total income of military families is shown in Tables 263 and 264. Total family income, by the pay grade of the military member, is shown in Table 265 for enlisted personnel and Table 266 for officers. Because differences among the Services in this regard are not significant, Service-specific tables have not been included here.

In regard to job search activities of both enlisted personnel and officers, respondents were asked if, in the 12 months immediately preceding the survey, they had received civilian job offers that they could take if they left the service. As shown in Table 267, 45 percent of the enlisted personnel report that they had received a civilian job offer. Of those who received job offers, about half were E-4s and E-5s. Forty percent of the officers, the majority of them 0-3s, reported that they had received a civilian job offer (Table 268).

*Survey respondents were asked to assess the probability that they would find a good civilian job if they left the military at the time of the survey (January-June 1979). The results are presented in Table 269 for enlisted personnel and Table 270 for officers, by year of service. The data indicate considerable confidence on the part of all military personnel in being able to find a good civilian job. The percentages of respondents who indicated that they were "certain" or "almost sure" ranged from 39 percent of enlisted Air Force personnel to 56 percent of Navy officers. Because of their similarity to Tables 269 and 270, detailed Service-specific tables are omitted.

¹For a discussion of the probability measures used in the survey, see Section X.

The extent to which military skills were seen as transferable to the civilian sector is shown in Tables 271 and 272. About 24 percent of all enlisted personnel believed that there was "no chance" or a "very slight possibility" that their skills were transferable, while 31 percent were "almost sure" or "certain" that their skills were transferable. Army enlisted personnel considered their skills least transferable and Navy personnel most transferable. Officers were more confident, with only about 15 percent indicating "no chance" or "very slight possibility" and 37 percent "almost sure" or "certain." A comparison of the Services showed Marine Corps officers to be least and Navy officers most certain.

The next set of tables presents respondents' comparisons of their present military job with the job they would take if they left the military at the time of the survey. The following characteristics of military and civilian jobs are compared, by respondents' service.

Immediate supervisors (Tables 273 and 286)
Employee/employer relations (Tables 274 and 287)
Retirement benefits (Tables 275 and 288)
Medical benefits (Tables 276 and 289)
Chances for interesting and challenging work (Tables 277 and 290)
Wages or salaries (Tables 278 and 291)
Chances for promotion (Tables 279 and 292)
Opportunities for training (Tables 280 and 293)
Colleagues (Tables 281 and 294)
Work schedule and hours (Tables 282 and 295)
Job security (Tables 283 and 296)
Equipment used on the job (Tables 284 and 297)
Location of the job (Tables 285 and 298)

The comparisons in these tables reveal differences from Service to Service and from characteristic to characteristic. Air Force enlisted personnel, for example, were more likely than members of the other Services to indicate that their immediate supervisors would

probably have similar characteristics in civilian and military jobs. Survey respondents also tended to view some characteristics as being better in civilian jobs and some as being better in military jobs. Two characteristics—wages and salaries and job location—were viewed as being considerably more favorable in civilian jobs. Three other characteristics—medical benefits, retirement benefits, and job security—were considered better in the military. For each characteristic except pay, a sizable group of enlisted personnel saw civilian and military jobs as being about the same. Only 10 percent of enlisted personnel considered pay comparable; 86 percent viewed civilian pay as better and 4 percent as worse. Tables 286-298 for officers show similar patterns but somewhat tighter distributions; that is, larger percentages tended to see military and civilian jobs as being about the same.

The above tables compared individual compensation components, such as medical and retirement benefits, in cavilian and military jobs.

Tables 299 and 300 compare total compensation. Respondents were asked to compare their total military compensation, i.e., pay and benefits, with what they would expect to receive in a civilian job. As seen in Table 299, the positive evaluation of specific military benefits somewhat adjusts for the negative evaluation of pay and wages. Nevertheless, about half of all enlisted personnel, ranging from 61 percent in the Navy to 40 percent in the Army, viewed civilian pay and benefits as a little better or a lot better than military pay and benefits. Similarly, about half of all officers considered civilian pay and benefits better than military. Service differences, however, were less marked than among enlisted personnel (see Table 300).

As part of collecting detailed economic data on military personnel, the survey included several items about indebtedness, assets, and the respondents' perception of their own economic well-being. Indebtedness, exclusive of mortgages, and the total value of assets (savings accounts, checking accounts, cash, U.S. savings bonds, stocks, and securities) are shown in Tables 301-304. About 23 percent of enlisted personnel indicated their current debts to be between \$500 and \$1999 and another 24 percent between \$2000 and \$4999; the middle pay grades, E-4 and

311

E-5, were more likely to have debts than other enlisted personnel (Table 301). Officers had higher levels of indebtedness, with officers in pay grade O-3 more likely to report debts than others (Table 302). Assets of enlisted personnel, as defined in the survey, were quite low. According to Table 303, about half of the enlisted personnel reported assets of less than \$500, 28 percent between \$500 and \$1999, and the remainder over \$5000. Officers' assets, like their indebtedness, were higher than those of enlisted personnel. Table 304 shows only 12 percent reporting assets of up to \$499 and approximately 20 percent in each of the next three categories (\$500 to \$1999, \$2000 to \$4999, and \$5000 to \$9999). Thirty percent of the officers reported assets of over \$10,000.

In comparing their financial situation at the time of the survey and three years earlier, both enlisted personnel and officers expressed diverse opinions (see Tables 305-314). The fact that many of the enlisted personnel, especially in the lower pay grades, had not been in the military three years prior to the survey to some extent affected their responses. Overall, about half saw their financial situation as somewhat better or a lot better, 22 percent saw it as about the same, and 28 percent as somewhat worse or a lot worse at the time of the survey. Among officers, as shown in Table 310, higher percentages saw an improvement in their financial situation: 58 percent reported it to be a lot better or somewhat better, 18 percent as about the same, and 24 percent as somewhat worse or a lot worse. Lower ranking officers, 0-ls and 0-2s, saw more improvement than those in higher pay grades.

IX. MILITARY COMPENSATION AND BENEFITS

Military personnel receive monetary and nonmonetary benefits in addition to basic pay. These other benefits, including living quarters, subsistence allowances, and the tax advantage derived from the tax-exempt status of the allowances, together with basic pay constitute regular military compensation (RMC). RMC tables are based on averages of actual rates for the grade and years of service for both married and single personnel. An individual's actual RMC may at any given time be higher or lower than shown in the current table, depending on his or her status. Tables 315 and 316 show the average annual RMC of enlisted personnel and officers as of October 1, 1978, the date of the RMC table in effect at the time of the survey.

While the benefits that constitute RMC are well defined as a function of an individual's pay grade or specific military assignment, other benefits, such as access to military exchanges, commissaries, and medical services, are of a discretionary nature. This section describes the use by military personnel of these discretionary benefits and housing and assesses their value or the satisfactions that they provide.

Survey respondents were asked to report the actual dollar amounts that they, their spouses, and dependents spent at military exchanges and commissaries. Tables 317-320 present these data as percentages of the respondents' RMC. Similar distributions are presented for expenditures at civilian grocery stores in Table 321 for enlisted personnel and 322 for officers. Spending patterns at military exchanges showed similarities among the Services and among officers and enlisted personnel. Two-thirds of the enlisted personnel and over 85 percent of the officers reported spending between 1 and 10 percent of their RMC at military exchanges. The use of military commissaries and civilian grocery stores, however, varies by Service, as well as between officers and enlisted personnel within each Service.

To find out about the value to Armed Forces personnel of such benefits as medical services, commissaries, and exchanges, the survey

asked respondents to assume that they were assigned to a duty station where these benefits were not available and that they would instead be compensated with additional monthly allowances. Under these assumptions, they were asked to designate a fair monthly allowance. The results, tabulated by whether or not the respondent was married and had dependents, are shown in Tables 323-325 for enlisted personnel and 326-328 for officers.

In general, both officers and enlisted personnel placed higher values on military medical services and commissaries than on exchanges, and officers tended to place lower values on all three of these services than did enlisted personnel. As might be expected, individuals with dependents tended to value these services more than those without dependents, although the differences do not appear to be large.

The survey also sought information about the current housing of military personnel. The survey questions focused on housing type, reasons for occupying civilian housing, and basic information about housing costs. The distributions of different types of housing occupied by enlisted personnel are shown in Table 329 and by officers in Table 330. Over 60 percent of the officers, but only some 41 percent of enlisted personnel, reported living in civilian housing. The differences between enlisted personnel and officers and among the Services are accounted for in part by differences in occupational requirements and by the marital status of the various groups. In addition, the greater economic resources available to officers are reflected in the larger percentage who reported owning their own home (data not shown). The reasons given for living in civilian housing appear in Tables 331 and 332.

Satisfaction with housing was measured on a seven-point scale with the verbal cues "very dissatisfied" (1) and "very satisfied" (7) marking the two end points. As can be seen in Table 333, enlisted personnel are distributed approximately equally across the scale, and Service differences are minimal. Overall, about 29 percent marked the two extreme categories of dissatisfaction and 30 percent the two extreme categories of satisfaction. Table 334 for officers, however, shows greater overall levels of satisfaction, with only 11 percent of

the DoD total indicating extreme dissatisfaction and 53 percent indicating extreme satisfaction. Again, Service differences are minimal.

The levels of satisfaction are obviously a function of the type of housing occupied, as seen in Table 335 for enlisted personnel and Table 336 for officers. Highest levels of dissatisfaction were expressed by those on ships or in open bay or troop barracks; highest levels of satisfaction, by those in civilian housing or on-base military family housing. The relationship between household composition and housing satisfaction is shown in Tables 337 and 338.

X. SERVICE AND CAREER PLANS OF MILITARY PERSONNEL

Because the retention of Armed Forces personnel has been the major military manpower issue of the past several years, the 1978-1979 DoD Survey of Officers and Enlisted Personnel collected data on the plans of military personnel and the reasons for their dissatisfaction with military life. These data are being used to support evaluations of proposed policy programs to increase reenlistment and retention rates. This section discusses aspects of reenlistment and the expected total length of service of military personnel.

Tables 339-343 show enlisted personnel's expected years of service. Overall, 44 percent of the enlisted personnel currently on active duty plan to remain in the military until they have had at least 16 years of service. Those with five years or less of service are less likely than those with longer service to plan to remain in the military for 16 or more years. Air Force enlisted personnel plan to spend more years in the military than do personnel in the other Services. Among officers (Tables 344-348), 74 percent expect to remain in the military until they have served at least 16 years; Navy officers plan on fewer total years of service than officers in the other Services.

Closely linked to expectations of years of service are expectations related to pay grade. Tables 349-353 for enlisted personnel and Tables 354-358 for officers tabulate current pay grade by expected pay grade.

Expectations regarding the duration of military service may be based on the level of satisfaction with military service, perceptions of opportunities in the civilian sector, and personal factors. Survey respondents who were considering leaving military service at the time of the survey were asked to indicate their three most important reasons, from a list of 16, for wanting to leave. Although they were not asked to rank the three reasons, rank orderings were induced in the aggregate by the percentage of personnel marking specific items.

Tables 359 for enlisted personnel and 360 for officers show the percentage that considered each of the reasons important. The reasons

are listed in the tables in the order in which they appeared in the questionnaire. With the one exception discussed below, the highest percentage of enlisted personnel in all the Services marked the following three reasons most frequently:

- o Low pay and allowances
- o Better civilian job opportunities
- o Reduction in military benefits

Navy and Marine Corps enlisted personnel marked them in that order. Air Force and Army personnel marked "reduction of military benefits" most frequently, followed by "low pay and allowances." In the Army, the "decline in personnel quality" was the third most frequently given reason, slightly ahead of "better civilian job opportunities." The next most important reasons included plans to continue education, dislike of family separation, and disagreement with personnel policies. Navy enlisted personnel appeared more sensitive to family separation than members of the other Services. Officers considered the following their most important reasons for leaving the military:

- o Reduction of military benefits
- o Better civilian job opportunities

These were followed by low pay and allowances, family wishes, dislike of family separation, decline in personnel quality, and unreasonable work schedules and hours.

Additional insight into the reasons for leaving the Armed Forces—both those that are inherent in military life (e.g., frequency of moves and personnel policies) and those that are external (e.g., better civilian job opportunities)—can be obtained by looking at these reasons in terms of such characteristics as the respondents' years of service and marital status. For example, unmarried Navy enlisted personnel with 1 to 6 years of service marked "better civilian job opportunities" most frequently; unmarried Navy enlisted personnel with 7 to 10 years of service marked "decline in quality of military personnel" most frequently (data not shown).

Several survey approaches may be used to study decisions such as reenlistment. Individuals may be surveyed before and after a major decision, or their intended behavior may be surveyed prior to a decision and their actual behavior assessed from other sources. Finally, assuming the relationship between intended and actual behavior is known, one-time measurement of intentions can provide considerable analytic insights.

The 1978-1979 DoD Survey measured reenlistment *intentions*. Because individual identifiers are not attached to the data base, there is no way to reinterview respondents who either reenlisted or separated, or to verify the relationship between intentions and behavior through administrative files for this sample. Several studies indicate, however, that intentions are reliable predictors of behavior (perhaps with a minor statistical adjustment). Three especially relevant studies are those of Brunner, Chow and Polich, and Hiller. 1

Chow and Polich studied first-term reenlistment behavior, based on data from the 1976 DoD Survey of Officers and Enlisted Personnel, a survey similar in form and content to the current one. Over 9000 first-termers (representing all Services) who were within one year of a reenlistment decision responded to the survey. Because the respondents recorded their Social Security numbers on the survey form, the authors were able to obtain the respondents' personnel records from the DoD Master File and Loss File for March 1977. Reenlistment and separation rates could be determined from those two files and compared with the statements of intentions.

The authors used two measures of intentions. One question asked for the reenlistment decision in terms of yes, no, or undecided; a second question asked for the probability of reenlistment on a tenpoint probability scale. The authors discovered a close relationship between intentions and behavior. Of those who answered that they would not reenlist, for example, only about 5 percent actually did

¹G. L. Brunner, The Importance of Volunteer Status: An Analysis and Reliability Test of Survey Data, The Rand Corporation, R-717-PR, December 1971; Winston K. Chow and J. Michael Polich, Models of the First-Term Reenlistment Decision, The Rand Corporation, R-2468-MRAL, September 1980; and John Hiller, Analysis of Second-Term Reenlistment Behavior, The Rand Corporation, R-2884, forthcoming.

reenlist; the reenlistment rate for those who said that they would reenlist was over 86 percent. The probability categories also appeared to predict behavior relatively accurately when used instead of simple yes-no questions. For example, if intentions accurately predict behavior, of those in the 50 percent category, one-half should eventually reenlist. Table 361 summarizes these results.

In his study of second-term reenlistment behavior, Hiller reviewed both the Brunner and the Chow and Polich works and then estimated the actual statistical relationship between reenlistment intentions and behavior, based on (weighted) least squares estimates from the Chow and Polich data. He concluded that actual reenlistment rates tend to be slightly higher than expressed intentions, but in a systematic way. Specifically, the ratio of the probability of reenlistment based on behavior to the probability based on intentions is 1.09. Since the data used by Chow and Polich were collected only a few years before the 1978-1979 DoD Survey, Hiller uses the correction factor of 1.09 in his work. The authors of the present study concluded, therefore, that the intentions data reported in the 1978-1979 DoD Survey were closely related to the actual future behavior of survey respondents.

The basic question on reenlistment intentions in the 1978-1979 DoD Survey was worded as follows:

How likely are you to reenlist at the end of your current term of service? Assume that no Reenlistment Bonus Payments will be given, but that all other special pays which you currently receive are still available. (Mark one)

Does not apply, I plan to retire.

- (0 in 10) No chance
- (1 in 10) Very slight possibility
- (2 in 10) Slight possibility
- (3 in 10) Some possibility
- (4 in 10) Fair possibility
- (5 in 10) Fairly good possibility
- (6 in 10) Good possibility
- (7 in 10) Probable
- (8 in 10) Very probable
- (9 in 10) Almost sure
- (10 in 10) Certain

Don't know.

The 1976 DoD Survey combined the two points at the beginning of the probability scale and the last two points at the end (see Table 361). The end points were separated, however, in the 1978-1979 DoD Survey, because the pretest experience of the survey indicated that respondents were more comfortable with definite end points and the opportunity to deviate slightly from them.

Subsequent questions used modifications of this basic format. For example, one item asked: How likely would you be to reenlist at the end of your current term if military personnel in your career field received a \$4000 bonus?

Table 362 shows the responses to the basic questions on the intention to reenlist, by Service. About 27 percent of enlisted personnel indicated a zero possibility (no chance) that they would reenlist. At the other end of the scale, only 16 percent indicated that they were certain of their plans to reenlist. Navy personnel indicated the lowest probabilities of reenlistment, followed by the Marine Corps, Army, and Air Force. When examined by respondents' years of service, the ordering among the Services remains the same (data not shown). The probability of reenlistment decreases in the first four years of service, then increases until 13 to 15 years of service, and then again decreases somewhat (data not shown).

The next four tables show the distribution of responses of the enlisted personnel who were asked, on Form 1, to indicate their intentions with regard to reenlistment under four policy options: a two-yer reenlistment term (Lable 363), a guaranteed location choice (Table 364), a \$4000 bonus (Table 365), and an \$8000 bonus (Table 366). The tables indicate that reenlistment intentions changed predictably and systematically with the introduction of these options. A two-year reenlistment term without a bonus proved more attractive than current reenlistment terms. The promise of a \$4000 bonus raised the number who said that they would reenlist; the guarantee of a desired

location and the offer of an \$8000 bonus increased the number of potential reenlistments still further. The distribution of these data by years of service (YOS) indicated a consistency of responses among YOS groups (data not shown). The data suggest that, to increase reenlistment, military policymakers should consider experimentation with a broad range of incentives and modifications to the quality of life of military personnel.

Enlisted personnel answering Form 2 were asked about their reenlistment intentions with regard to several policy options: guaranteed training in a new field (Table 367), first choice of location (Table 368), last choice of location (Table 369), first choice of location plus a \$200 pr month bonus (data not shown), and last choice of location plus a \$200 per month bonus (data not shown). The data suggest that guaranteed retraining does not, on the whole, affect the intention to reenlist. The sensitivity of military personnel to their assignment locations, however, is clearly demonstrated by these data. A \$200 per month bonus increased the number of intended reenlistments when coupled with a first-choice location, but made little difference when linked to a last-choice location. Further analysis should examine the relationship between location and the intention to reenlist. The data for such analysis were provided by Form 2, which asked respondents to indicate their most favored (see Table 211, pp. 254-255) and least favored (see Table 213, pp. 258-259) locations and their reenlistment intentions for each of these six locations.

Form 2 of the survey also questioned the intentions of enlisted personnel to extend their current tours of duty under several hypotheses. Table 370 displays the extension intentions of enlisted personnel under the assumption that they were stationed at the location of choice and would be given a \$200 per month bonus for extending their tour of duty for one year. Table 371 shows intentions corresponding to the offer of a \$200 bonus per month at least-desired locations. As in the case of the intention to reenlist, that level of bonus offer at least-desired locations had little effect on the intention to extend the tour of duty.

The last three tables in this section present other data related to career plans. Table 372 shows the extent to which enlisted personnel believe that their next tour of duty will be in an undesirable location; Table 373 gives comparable data for officers. Finally, related to the interest in a two-year term shown by enlisted personnel (Table 363, above), Table 374 provides the distribution of preferred reenlistment terms. In every Service, preference was shown for terms shorter than those currently available.

XI. PROMOTION POTENTIAL FROM THE PROSPECTIVE OF MILITARY PERSONNEL

In any organization, promotion in recognition of achievement usually carries with it higher levels of pay and benefits. Promotion policy therefore importantly influences the decision to remain a member of the Armed Forces. This section deals with promotion issues as viewed by military personnel.

Survey respondents were asked to assign a probability to their own chances of promotion to a higher pay grade, using the probability scale described in Section X. Tables 375-379 for enlisted personnel and 380-384 for officers display the results, by pay grade. Excluded from the tables were individuals who planned to retire or leave the military, expected no further promotion, or did not know their chances. Twenty-five percent of the enlisted personnel were certain that they would be promoted, and an additional 30 percent were 70 to 90 percent sure. As might be expected, certainty decreased with increasing pay grade. Air Force personnel expressed the greatest certainty, but Service differences were not marked. Just under 34 percent of the officers were certain of promotion, and an additional 30 percent were 70 to 90 percent sure. Again, certainty decreased with increasing pay grade. Air Force officers indicated lower levels of certainty than enlisted personnel.

In assigning a probability to their own chances of promotion, respondents were, in part, comparing themselves with their peers. The survey measured peer comparison directly by asking respondents whether they expected to be promoted earlier than most, at about the same rate, or later than most other members of their cohort. The results, tabulated by year of service, appear in Table 385 for enlisted personnel and Table 386 for officers. About 25 percent of the enlisted personnel saw their promotion as being earlier than most and 38 percent at the same rate. Within year-of-service groups, a larger percentage in the 9 to 15 year groups tended to see themselves as being promoted earlier and a smaller percentage in the 16 year and over groups. Fewer

officers (about 11 percent) than enlisted personnel (about 25 percent) saw themselves as being promoted earlier; 59 percent of the officers considered their promotion rate as being about the same as that of their peers. Tables 387 for enlisted personnel and 388 for officers summarize data showing when military personnel expect their next promotion.

The importance of promotion is most clearly seen in Tables 389 for enlisted personnel and 390 for officers. Asked the likelihood of their reenlistment, assuming that the opportunity for promotion had been reduced by 50 percent because of reduced manpower requirements, 41 percent of the enlisted personnel indicated that they would not reenlist and another 20 percent indicated only a very slight or slight likelihood. The comparable figures for reenlistment without this assumption were 27 percent and 14 percent (see Table 362). Service differed, with Navy and Marine Corps enlisted personnel more likely to indicate that reduced promotion opportunities would affect their reenlistment decision. Among officers, about 29 percent indicated that they would not remain in the military if their promotion opportunity were reduced by half; an additional 21 percent indicated that the probability would be very slight or slight. Service differences among officers were much smaller than those among enlisted personnel.

XII. THE RETIREMENT SYSTEM FROM THE PERSPECTIVE OF MILITARY PERSONNEL

The Department of Defense and Congress have for several years been debating changes in the military retirement system. At the time the 1978-1979 DoD Survey was conducted, the Department of Defense was considering different payment plans and plans linked to an individual's age and years of service. The survey asked respondents to indicate whether they preferred the current plan or one of two hypothetical plans, which, although not precisely the same as those under discussion, included some of the basic components that any future plans might be expected to contain. This section presents the results.

As a basis for subsequent analyses, the respondents' familiarity with the current system was tested. The results suggest that a large number of military personnel may not understand the current benefits. The question was worded as follows:

Currently, all military personnel who retire after 20 or more years of service are given retirement benefits which begin immediately upon retirement and continue for life. People who leave the service with 20 years of service receive 50 percent of their basic pay as retirement benefits. Suppose you retire with 26 years of service—under the current retirement system, what percent of your basic pay would you receive as retirement pay?

The correct answer is 65 percent. As can be seen in Table 391 for enlisted personnel and Table 392 for officers, only one-third of the enlisted personnel and two-thirds of the officers answered correctly; the remainder seemed to know that the percent would be greater than 50 but were either unsure of how to figure it or made arithmetic errors. As would be expected, the closer individuals were to retirement, the more likely they were to know the correct figure.

Enlisted personnel and officers were asked to indicate preferences for one of several payment schedules. The payment amounts shown in the enlisted questionnaire were based on the assumption that an individual retired at an E-7 pay grade with 20 years of service.

Respondents were told that future payments would be adjusted for inflation and taxed in the same way as current retirement benefits. The officer question was based on a retirement at an 0-5 pay grade after 20 years of service. As can be seen in Table 393, 58 percent of enlisted personnel preferred lifetime payments; 20 percent, a lump sum payment; and the remainder, intermediate payment schedules. Almost 72 percent of the officers (Table 394) preferred lifetime payment; 14 percent, a lump sum at retirement; and the remainder, intermediate payment schedules.

The fact that two different questionnaires were designed for enlisted personnel and two for officers provided the flexibility to try two different retirement plans on each group. Plan A, presented to enlisted personnel in Form 1 and officers in Form 3, postulated that personnel who remained in the military for ten or more years would receive (1) a special lump sum bonus when they left the service (the bonus would be taxable) and (2) retirement pay. The questionnaires listed the Plan A bonus amounts and the percentage of basic pay that would be paid as retirement benefits for enlisted personnel as follows:

Years of Service	Amount of Lump Sum Bonus at Retirement	% of Basic Pay as Retirement Benefits	Age at Which Benefits Would Begin
Less than 10	\$ O	0	
10	8,000	20.0	65
11	10,000	22. 5	65
12	12,000	25.0	65
13	14,000	27.5	65
14	16,000	30.0	65
15	20,000	32.5	62
16	24,000	35.0	62
17	28,000	37.5	62
18	32,000	40.0	62
19	36,000	42.5	62
20	40,000	45.0	60
21	43,000	48.0	60
22	46,000	51.0	60
23	49,000	54.0	60
24	52,000	57.0	60
25	54,000	60.0	60
26	56,000	63.0	60
27	58,000	66.0	60
28	60,000	69.0	60
29	62,000	72.0	60
30	64,000	75.0	55

The corresponding Plan A bonus amounts and retirement benefits for officers were given as follows:

Years of Service	Amount of Lump Sum Bonus at Retirement	% of Basic Pay as Retirement Benefits	Age at Which Benefits Would Begin
Less Than 10	\$ 0 `	0	dia vite
10	16,000	20.0	65
11	20,000	22.5	65
12	24,000	25.0	65
13	30,000	27.5	65
14	36,000	30.0	65
15	44,000	32.5	62
16	52,000	35.0	62
17	60,000	37.5	62
18	68,000	40.0	62
19	76,000	42.5	62
20	84,000	45.0	60
21	92,000	48.0	60
22	100,000	51.0	60
23	108,000	54.0	60
24	114,000	57.0	60
25	120,000	60.0	60
26	124,000	63.0	60
27	128,000	66.0	60
28	132,000	69.0	60
29	136,000	72.0	60
30	140,000	75.0	55

Following the description of these benefits, respondents were asked to indicate a preference for Plan A or the current retirement plan and to estimate the total number of years that they might have planned to serve had Plan A been in effect when they first entered the military service and the pay grade at which they might have expected to retire. These data (not shown) might be analyzed in conjunction with information about current plans to remain in the military.

Tables 395 (enlisted personnel) and 396 (officers) compare preferences for Plan A and the current military plan. Enlisted personnel were divided, with 51 percent favoring the current plan. Army enlisted personnel favored the proposed plan somewhat more (54 percent) and Navy personnel somewhat—less (47 percent) than members of the other two Services. Support for the proposed plan was greater among

those with fewer years of service. Officers tended to prefer the current retirement plan. Overall, only 36 percent favored Plan A, including 41 percent of Army officers and about one-third in each of the other Services.

The second alternative retirement plan, Plan B, presented to enlisted respondents in Form 2 and officers in Form 4 offered the following benefits: (1) personnel with 10 to 29 years of service would receive full retirement pay, beginning at the age of 60; (2) those with 20 to 29 years of service would also receive partial retirement pay from the time they left the Service until they reached 60, when full benefits would begin; and (3) those with 30 years of service would receive full retirement pay starting immediately upon retirement.

The following benefits would be paid to enlisted personnel under Plan B:

% of Basic Pay as Retirement Benefits

The corresponding Plan B retirement benefits for officers were given as follows:

% of Basic Pay as Retirement Benefits

Years	of Service	From Retirement to Age 60	After Age 60
Less	than 10	0	0
	10	0	25.0
	11	0	27.5
	12	0	30.0
	13	0	32.5
	14	0	35.0
	15	0	37.5
	16	0	40.0
	17	0	42.5
	18	0	45.0
	19	0	47.5
	20	25	50.0
	21	27	52.5
	22	30	55.0
	23	34	57.5
	24	39	60.0
	25	44	62.5
	26	50	65.0
	27	57	67.5
	28	63	70.0
	29	69	72.5
	30	75	75.0

Respondents were asked to indicate a preference for Plan B or the current military retirement plan and to estimate the total number of years that they might have expected to serve and the pay grade at which they might have expected to retire had such a plan been available to them (data on these estimates not shown). Plan B generated even less interest than Plan A compared with the current retirement system. Thirty percent of all enlisted personnel (Table 397) favored Plan B, ranging from 38 percent in the Marine Corps to 20 percent in the Air Force. Year-of-service differences were less marked in assessments of Plan B than they were in assessments of Plan A. Only 18 percent of all officers, with minor Service differences, favored Plan B (Table 398).

XIII. THE VIEWS OF MILITARY PERSONNEL ON PARTICIPATION IN THE RESERVES AFTER LEAVING ACTIVE DUTY

Personnel separating from the active forces have historically constituted a major source of trained manpower for the Selected Reserves. This section describes the current views of military personnel on participation in the reserves after leaving active duty.

Table 399 deals with the plans of enlisted personnel to join a National Guard or Reserve unit once they have left the military. Overall, about one-fifth indicated the intention to join ("definitely yes" or "probably yes"), about half showed no such intention ("probably no" or "definitely no"), and the remainder were uncertain. Differences showed up among Services: Army personnel were almost twice as likely as Air Force personnel to respond positively; Marine Corps and Navy personnel showed intermediate interest. Furthermore, the percent who were unsure ran to about 31 percent in the Army and about 25 percent in the other Services. Officer responses (Table 400) showed a similar pattern but differed in magnitude. While not quite one-fourth of the officers responded positively, almost three-fourths answered negatively. The percentage of officers who were uncertain about future Reserve participation was lower than that of enlisted personnel. Again, Army officers were the most positive, and Air Force officers the most negative. Differences among Services, however, were smaller than differences observed for enlisted personnel.

Tables 401-405 display responses to the question of future participation, tabulated according to the time the individual has left in his current term. The tables suggest that plans to participate are not necessarily related to the time remaining before the individual either reenlists or separates. For example, 23 percent of all enlisted personnel with less than three months of obligated service remaining gave positive responses, compared to 24 percent of those with three years or more. To some extent, individuals with longer periods of obligated

The question was part of the series about future plans described in Section X_{\bullet}

service remaining were more likely to give an uncertain response. Among officers, as shown in Tables 406-410, those with no service obligation were less interested in the Reserves than those with remaining obligations.

Interest in Reserve participation is, however, related to the current tenure of enlisted personnel. As seen in Table 411, the percentage who gave a positive response was between 24 and 28 percent among those with ten years or less service and decreases steadily in subsequent year-of-service groups. Among officers (Table 412), interest reached its height among those with between one and five years of service (slightly over 45 percent) and decreased sharply after that point. These data indicate that personnel who would bring the most experience to the Reserves are the least interested in participation.

Table 413 for enlisted personnel and Table 414 for officers address ways of increasing participation in the Individual Ready Reserve (IRR). The survey described the following hypothetical program for prior-service personnel:

Suppose there were a new military program in which service personnel could participate after they leave the military. The program requires that you must keep the military informed of your address and you could be recalled to service in the event of a national emergency. However, you would not be required to attend drills or serve on active duty unless there were an emergency. If you were given a bonus of \$200 for each year you participated in this program, how many years would you be willing to stay in this program?

As can be seen, the responses of both enlisted personnel and officers suggested either no interest or a long-term interest in such a program. About 44 percent of all personnel indicated that they would not be interested; 37 percent of enlisted personnel and 48 percent of officers indicated a willingness to stay in such a program for six or more years. Among enlisted personnel, Service differences were minor. Army officers appear most interested and Air Force officers the least interested.

XIV. RELATIONS AMONG RACIAL AND ETHNIC GROUPS IN THE ARMED FORCES

The Armed Forces have been credited with integrating more effectively and experiencing less racial tension than other sectors of the U.S. population. The unprecedented increase in the number of minority group members who have joined the Armed Forces in recent years, however, raises the question of the effects of this increase on intergroup relations and, ultimately, on military performance. As a contribution to the updating of public policy research on the role of the Armed Forces as an agent of social change and the implications of the increasing presence of members of minority groups in the Armed Forces, the 1978-1979 DoD Survey of Officers and Enlisted Personnel collected data on military personnel's perceptions of the relative number of minority group members, intergroup homogeneity, equal opportunity, comparative treatment, and racial discrimination in the Armed Forces. This section presents some of these data.

Form 2 of the survey asked for the number of military personnel assigned to each respondent's primary work unit and the proportion of the primary work unit personnel who were members of minority groups. As expected, the larger the work unit, the greater the likelihood that it contained minority members. According to Table 415, about 25 percent of the work units with from one to 25 members contained no minority members. Tables 416-419 display these data by Service. The smallest percentage of such units was in the Army (18 percent), the largest in the Navy (31 percent). Over 11 percent of enlisted personnel reported being in units (of all sizes) in which more than half of the personnel were members of minority groups, including 5.3 percent in the Navy,

²The research conducted after World War II and the Korean conflict, and to a lesser extent after the Vietnam war, to assess the performance of minority, especially black, soldiers has been outdated by the increased number of minority members of the Armed Forces and by changes in national and military attitudes toward intergroup relations and social integration.

Tables 37-48 (pp. 57-68) in Section IV show minority group members to constitute a significant percentage of military personnel.

5.7 percent in the Air Force, 9.5 percent in the Marine Corps, and 20.4 percent in the Army. The data collected from officers, displayed in Tables 420-424, show similar patterns. Differences between enlisted personnel and officers resulted either from differences in definitions of the primary work unit or in the composition of work units in various occupational specialties.

Respondents who reported the presence of minority group members in their primary work units were asked the frequency with which people of their own race complained that people of other races or ethnic groups were being given better treatment in the Armed Forces; avoided interacting with people of other races or ethnic groups; spoke ill of or told racist jokes about people of other races or ethnic groups; spoke to each other about the problems of other races or ethnic groups in the Armed Forces. The results, tabulated by the respondents' race, are shown in Tables 425-429 for enlisted personnel and Tables 430-434 for officers. A comparison of Table 425, for all enlisted personnel, with Table 430, for all officers, shows more negative discussion about minority groups and greater avoidance of interaction with minority members among enlisted personnel than among officers. The Service-specific tables indicate that Army enlisted personnel and officers held these attitudes more frequently than members of the other Services.

These tables show that complaints, avoidance, and slurs are by no means restricted to a single ethnic or racial group. Each racial or ethnic group contains a nontrivial segment which admits to complaining that other groups are given preferential treatment or to avoiding interaction with members of other groups. Further analyses should examine these data at more disaggregated levels of unit size and composition, as well as by occupational specialty. If, for example, avoidance of interaction is characteristic of units that require extensive teamwork for effective performance, ameliorative action may be necessary.

Survey respondents were also asked to assess the importance that their Service leaders attached to equal opportunity and race relations training. Table 435 for enlisted personnel indicates general agreement among all racial groups in assigning levels of importance, with over 40 percent indicating that equal opportunity and race relations training

was very important to their leaders and 13 percent indicating that it was not. Hispanic enlisted personnel saw Service leaders as slightly more supportive of equal opportunity, and whites saw them as somewhat less so. Similar patterns are observed when the data are displayed by Service (Tables 436-439). Fewer officers (Table 440) than enlisted personnel (Table 435) perceived military leaders as viewing equal opportunity and race relations training as very important (34 percent as against 41 percent), but fewer also rated this subject as not important (9 percent as against 13 percent). The officer responses by Service and respondents' race are summarized in Tables 441-444.

The relationship between the perception of the importance of equal opportunity described in Tables 435-444 and the attitudes and behaviors described in Tables 425-434 should be explored so as to clarify the relationship between individual perceptions of what military leaders consider important and individual behavior and attitudes toward minority members.

The results of an attempt to measure perceptions of the comparative treatment of blacks and whites in the military is displayed in Tables 445-449 for enlisted personnel and Tables 450-454 for officers. Respondents were asked to evaluate the comparative treatment of blacks and whites on a five-point scale, the midpoint being "In my Service, blacks are treated exactly the same as whites." Throughout the Armed Forces, about half of the enlisted personnel and two-thirds of the officers agreed with the statement that treatment was equal. Among both populations, however, differences based on the respondents' race and Service emerged. Blacks were much less likely than other groups to think that blacks and whites were treated equally: among the Services, half of the black enlisted personnel indicated that they believed the treatment of blacks to be worse or a lot worse than the treatment of whites. Whites were most likely to perceive equitable treatment, with Hispanics taking an intermediate position. pattern is even more marked among officers. Similar patterns appeared when respondents were asked to indicate which racial group had the best chances for promotion to a higher grade in their Service. See Tables 455-459 for enlisted personnel and 460-464 for officers.

The data do not disclose the factors that may affect the survey respondents' judgments about promotion opportunities. At one extreme, these data may reflect racial prejudice; at the other, they may reflect an assessment of the individual characteristics of minority groups, e.g., educational levels and occupational assignments, which in fact lead to differences in promotions.

Finally, survey respondents were asked to comment on the extent to which they personally experienced racial or ethnic discrimination at their present assignment in housing, civilian services (such as stores, bars, and banks), exchange services, training opportunities, promotion, and daily duty assignments. The results are displayed in Tables 465-469 for enlisted personnel and Tables 470-474 for officers.

Without consideration of racial or ethnic group, enlisted personnel reported much more personal experience with discrimination than did officers. Among both officers and enlisted personnel, blacks reported considerably higher levels of personal discrimination than did respondents of other racial or ethnic groups. Among the Services, Army enlisted personnel reported the highest levels of discrimination; among officers, Service differences were less sharp. In comparing the six areas of discrimination measured, the reader should note that two-civilian housing and local civilian services—are outside the direct influence of military policy; the remainder fall entirely within the military. A detailed examination of these data both by the geographical and occupational distribution of personnel might suggest ameliorative policies.

XV. ATTITUDES TOWARD WOMEN IN THE MILITARY

Before the establishment of the All Volunteer Force, women constituted 1 to 2 percent of enlisted personnel and about 3 percent of officers. In 1972, 32,400 women were on active duty as enlisted personnel and 12,600 women as officers, totaling about 1.5 percent of the active force. By the end of FY 1980, the number of women on active duty had risen to 145,800 enlisted and 21,500 officers, or a total of 8.4 percent of the active force. The military Services' support of equal opportunity for women in the military and greater use of women to meet military manpower requirements stimulated these increases. Planners of the AVF had from the beginning viewed the increased use of women as a way to offset any shortage of men, especially high-quality men.

In 1980, the Department of Defense set recruiting goals that included raising the representation of women to approximately 12.5 percent by 1985. Concern was expressed about the Services' ability to meet these goals and the implications of the increased number of women for military effectiveness. In March 1981, OSD and each Service began a ioint review of the Service's current female officer and enlisted accession and retention policies. As part of the review, attitudinal data collected in the 1978-1979 DoD Survey of Officers and Enlisted Personnel were analyzed. Although these data cannot be used to assess the military effectiveness of women nor to provide direct policy guidance on questions related to the accession and use of women, they nevertheless offer a useful documentation of the attitudes of the men and women on active duty toward these issues. The tables in this section summarize the responses to specific questions about women in the military. Obviously, the data displayed in previous sections could also be examined in terms of distinctions among responses by sex.

Tables 475-479 for enlisted personnel and Tables 480-484 for officers deal with military assignments and training for women. Respondents indicated their views on allowing women to perform the skills in the respondent's own primary military occupation and on women's physical

and mental capacity to perform the skills in that military occupation. More than two-thirds of all male enlisted personnel and officers agreed that women should be allowed to perform in their military occupation. Both female officers and enlisted personnel overwhelmingly agreed.

To further examine the items listed in Tables 475-484, the respondents' occupations were grouped according to whether the military considered them traditional or nontraditional for women (data not shown). Traditional female occupations include medical, dental, support, and administrative specialties; all others are considered nontraditional. About 90 percent of the males in occupations classified as traditionally female and over 90 percent of all women, independent of occupation, agreed that women should be allowed to work in these occupations; however, fewer than two-thirds of the men in non-traditional female occupations thought that women should do their jobs. Similar patterns emerged with regard to opinions about the physical capabilities of women, both in the tables presented here and in the analysis by occupational classification into traditional and nontraditional (not shown).

Approximately 80 percent of male enlisted personnel and officers agreed that women were mentally able to perform the jobs that they (the males) were doing, with about 10 percent disagreeing and 10 percent neutral. Again, over 90 percent of both female enlisted personnel and officers, in both traditional and nontraditional occupations, agreed that females could perform that particular job. Even on this item, proportionately more men in traditional female occupations agreed than did those in nontraditional female occupations.

Nearly 80 percent of all respondents agreed that women should learn to use weapons. However, while more enlisted males than enlisted females believed that women should be given training and used in combat, more female than male officers thought so. Female officers also showed less disagreement with this item (less than 25 percent) than male officers and all enlisted personnel. Regarding responses to the question of whether women should be allowed to engage in hand-to-hand combat, the data show differences between enlisted personnel and officers, as well as between men and women. Between 40 and 46 percent of male

and female officers and enlisted males agreed that women should be allowed to engage in hand-to-hand combat, while 34 percent of enlisted females agreed. The greatest disagreement was among male officers (44 percent). Furthermore, one-fourth of all women indicated a neutral position on this item, a larger percentage of neutral responses than was found in responses to the other items in this series.

Tables 485-489 for enlisted personnel and Tables 490-494 for officers are based on responses only from individuals who had women in their primary work unit. Here, the emphasis was on the assessment of women as colleagues and the comparative treatment of women and men. Throughout, women viewed themselves more favorably than men viewed them. However, large proportions of both sexes either saw the performance and treatment of men and women as equal or expressed neutral attitudes.

^aNumbers in the column labeled "Total" represent the weighted number of responses in the corresponding rows. The other row entries are row percentages. No column percentages are given in this table.

XVI. SATISFACTION, MORALE, AND PROBLEMS IN MILITARY LIFE

This section summarizes the assessments by enlisted personnel and officers of their satisfaction with military life as a whole and their morale. It also provides information about the complaint channels—the individuals and organizations in and out of the military—to which they turn with complaints, grievances, and problems.

The first set of tables is based on the answers to one of the final items on each survey questionnaire: How satisfied or dissatisfied are you with the military as a way of life? The responses to this question are displayed for each Service and for the Armed Forces as a whole by sex (Tables 495 for enlisted personnel and 496 for officers), by assignment locations, divided into United States and foreign (Tables 497 and 498), by pay grade (Tables 499-503 and 504-508), and by race (Tables 509 and 510).

Overall, enlisted men expressed somewhat higher levels of dissatisfaction than enlisted women (about 28 percent of the men and 23 percent of the women indicated the two lowest levels of satisfaction on a sevenpoint scale). The difference between the sexes was most evident in the Navy, where 36 percent of the men but only 20 percent of the women showed dissatisfaction, followed by the Marine Corps (31 percent of the men and 26 percent of the women). At the other end of the scale, high levels of satisfaction were reported by similar fractions of both men and women (about 17 percent of both men and women marked the two highest levels on the seven-point scale). The overall percentages obscure the sex differences within Services. For example, 20 percent of the women in the Navy marked the two highest levels, while only 12 percent of the men did so. In the Army, about 18 percent of the men and 16 percent of the women selected the two highest response categories. Air Force men and women appeared to have the highest levels of general satisfaction with military life. Officers of both sexes were less likely than enlisted personnel to express overall dissatisfaction.

Where the respondents (both officers and enlisted personnel) were stationed—whether in the United States or overseas—appeared to make

no difference in the level of satisfaction; Tables 497 and 498 may, however, obscure differences that will emerge with more detailed locational analyses. Both enlisted personnel and officers in higher pay grades expressed higher levels of overall satisfaction with the military than those in lower grades. Satisfaction at the higher levels reflects some self-selection; that is, those who were dissatisfied left the Armed Forces before they reached the higher pay grades. Within enlisted pay-grade groups, levels of both dissatisfaction and satisfaction (upper two scale points and lower two scale points) varied considerably among Services. For example, about half of the Navy enlisted personnel in the E-1 to E-3 group and the E-4 group were dissatisfied, but only about one-fourth of Air Force enlisted personnel in these two pay-grade groups marked the two lower scale points. Furthermore, in every pay-grade group, slightly less than 10 percent of Navy personnel marked the highest two scale points, whereas among Air Force personnel, satisfaction ranged from 13 percent to 34 percent. Army and Marine Corps enlisted personnel expressed similar (to each other), intermediate levels of satisfaction.

In general, smaller percentages of black than white and other enlisted personnel and officers showed high levels of dissatisfaction. At the satisfaction end of the scale, black enlisted personnel responded similarly to other enlisted personnel. Black officers in the Army and, especially, the Air Force expressed higher levels of satisfaction than did their fellow white officers; in the Navy and Marine Corps, however, whites and others indicated greater satisfaction.

The next sets of tables show five levels of agreement with the following four statements about military life:

Life in the military is about what I expected it to be. Military personnel in the future will not have as good retirement benefits as I have now.

My military pay and benefits will not keep up with inflation. My family would be better off if I took a civilian job.

The data are displayed by Service and sex (Tables 511-514 for enlisted personnel and 515-518 for officers) and by Service and race (Tables 519-522 for enlisted personnel and 523-526 for officers).

The survey also sought the respondents' views of the overall morale of military personnel at their current location, including at sea. The data are presented, by location and size of location, in Tables 527-531 for enlisted personnel and 532-536 for officers. Among enlisted personnel, overall Service differences were small, with approximately one-third indicating that morale was low (lowest two scale points) and about 10 percent that it was high (highest two scale points). Officers also showed only small differences on this item among Services, but had a markedly different view of levels of morale from enlisted personnel. Overall, about 16 percent indicated that morale was low and 18 percent that it was high. Within Services, differences among locations and size of installation should be examined further.

The final set of tables provides data on the internal and external channels that military personnel use in their efforts to solve problems. Respondents were asked whether they had or had not used any of the listed channels to solve a complaint, grievance, or problem; more than one channel could be marked for one or several problems. Respondents who indicated that they had not used any of the listed channels were excluded from the tables. The results are displayed first by respondents' assignment location (CONUS, non-CONUS, or sea [Navy and Marine Corps only]) in Tables 537-541 for enlisted personnel and 542-546 for officers and then by their marital status in Tables 547-551 for enlisted personnel and 552-556 for officers.

In general, enlisted personnel and officers alike tried to resolve problems within the available military channels. However, a percentage of both groups turned to political channels and civilian agencies. Some 4.4 percent of enlisted personnel and 2.5 percent of officers reported that they had called on their congressmen for this purpose. Among enlisted personnel, a higher percentage of Army and Navy personnel reported turning to congressmen; Service differences among officers were not apparent. During a single year, then, the Congress evidently received over 50,000 complaints from members of the Armed Forces.
